Leber Jeweler Inc. is proud to offer our support to aid in the protection of Alaska's Bristol Bay Watershed. Our company, which has a long-standing history of sourcing the precious metals and gemstones we use in the most responsible manner possible, feels the development of the Pebble Open Pit Gold and Copper Mine would cause unnecessary harm to a valuable and precious environmental resource.

Our company continues to be a strong advocate for both sound environmental stewardship and the preservation of human rights in the extraction and sourcing of precious metals and gemstones. Working with fellow industry members, non-governmental organizations, as well as US government agencies and Members of Congress, we are steadfast in our determination to raise and uphold the highest standards of socially responsible business practices so that they may guarantee a healthy future for both our planet and all people.

Leber Jeweler Inc. believes the jewelry industry, from the mine to the retail store, has a shared obligation in addressing the myriad of issues that face us. We Salute the No Dirty Gold campaign for taking a stand on this very critical issue. The Pebble Mine Proposal is an example of how things should not be done, and we hope our company can help set a course that will make certain environmental treasures like Bristol Bay remain unharmed for generations to come.
